

ViVa *Visibility for Vaccines*

QUICK REFERENCE: **Creating a Campaign**

ViVa enables you to add additional requirements that would have an impact on stock levels and consumption, such as campaigns or outbreak responses. The tool allows you to enter the number of doses per vaccine, as well as the duration of the campaign. The tool will then include this figure into the projected stock levels and enable you to visualize the impact of a campaign on future stock levels.

1 From the Location Overview page, click on “Edit Data.”

2 From the Location Settings page, click on “Campaigns.”

3 You will see a list of previous and current campaigns. Click “Create new campaign” to add a new campaign.

The screenshot shows the 'Campaigns' page with a table of existing campaigns. The 'Create new Campaign' button is highlighted with a pink box.

Product	Start Date	End Date	Doses	
Measles	17/07/2016	31/07/2016	5000000	Edit Delete

4 Enter the vaccine, number of doses, and start/end dates of the campaign. Press "save."

5 Your campaign will now appear on the chart as red bars, for each week of the campaign.

Please note that there will be no change to the stock projection until you turn on "view impact of campaign."

6 Your stock projection line will now adjust to account for the new campaign requirements.

To remove the campaign, return to the location settings and delete the campaign from the list.

Please note that adding campaign requirements will have no impact on alert levels or recommendations. You must update the stock count for ViVa to recalculate alerts.
